

K China Controlled Volatility Fund-A(A)

K-CCTV-A(A)

Fund Type / AIMC Category

- Foreign Mixed Fund / Fund of Funds
- Greater China Equity

Investment Policy and Strategy

- The Fund mainly invests in at least 2 foreign funds which invest in equity, hybrid instruments, debt instruments and/or other securities listed, domiciled or issuers having main activity in China includes Mainland China, Taiwan and the special administrative regions of Hong Kong and Macau.
- In order to control portfolio's volatility, the fund manager will use own discretion to adjust capital allocation into each foreign fund according to market conditions.
- The Fund may invest in mutual funds under management of KAsset not more than 20% of NAV.
- The Fund and the foreign funds may invest in Structured Notes and derivatives for Efficient Portfolio Management purpose.
- The Fund will use derivatives to hedge against exchange rate risk at least 75% of foreign exposure.
- The foreign funds in which K-CCTV invests are UBS (Lux) Investment SICAV – China A Opportunity (USD), class P-acc and Schroder International Selection Fund – China A, Class A Accumulation USD.
- Aim to invest in foreign funds and adjust the allocation of each foreign fund according to market conditions.

Description

Maximum Drawdown is the percentage of the fund's maximum loss in the past 5 years (or since the fund's inception if it is launched for less than 5 years) which is measured from the highest NAV per unit to the lowest NAV per unit during such period. Maximum Drawdown is an indicator of the risk of loss from investing in the fund.

Recovering Period is the length of time that the fund takes in recovering from the point of maximum loss to earning back the initial investment.

FX Hedging is the percentage of foreign currency investment with FX hedging.

Portfolio Turnover Ratio (PTR) is the frequency of securities trading in the fund portfolio over a certain period, calculated by taking the lower value between the sum of the value of securities purchased and the sum of the value of securities sold of the fund in 1 year period divided by the average NAV in the same period.

A fund with high Portfolio Turnover Ratio indicates frequent securities trading by fund manager resulting in high trading costs. Therefore, it is necessary to compare with the performance of the fund in order to assess the worthiness of such securities trading.

Sharpe Ratio is the ratio between marginal return of the fund compared to investment risk, calculated from the difference between the fund's rate of return and risk-free rate compared to the fund's standard deviation. Sharpe Ratio reflects the additional return that the fund should earn to compensate risk. A fund with higher Sharpe Ratio is considered having superior investment management efficiency as it generates higher marginal return under the same risk level.

Alpha is the fund's excess return compared to the benchmark. High Alpha means the fund can generate higher return than the benchmark resulting from fund manager's efficiency in selecting securities or seeking appropriate market timing.

Beta is level and direction of change in return of securities in portfolio in comparison to market price change. Beta of less than 1 indicates that the change in return of securities in portfolio is less than the overall market. Beta of more than 1 indicates that the change in return of securities in portfolio is greater than the overall market.

Tracking Error is the efficiency of the fund to imitate its return to benchmark. Low Tracking Error means the fund is effective in generating return close to benchmark. High Tracking Error means the fund generates return more deviate from benchmark.

Yield to Maturity is the rate of return earned on a bond held to maturity, calculated from the interest expected to receive in the future over that bond duration and paid back principal discounted to the present value. It is used to measure return of fixed income funds by calculating the weighted average of Yield to Maturity of each bond that the fund invests. As Yield to Maturity has standard unit in percentage per annum, it can be used to compare the returns between fixed income funds that have an investment policy of holding bonds until maturity and similar investment characteristics.
