Other Information

Investment in Mutual Funds **IS NOT** a money deposit.

Disclaimer : The original language of this document is Thai. In case of any discrepancies, the Thai version shall prevail and supersede the English-translated version in all aspects.

What are you going to invest?

- The Fund will invest in debt securities, issued or guaranteed by Thai or foreign governments and agencies, state and provincial governmental entities, or by companies including deposits with credit institutions.
- The maximum weighted average duration of the portfolio is no more than a year.
- The Fund shall not invest more than 50% of NAV in foreign securities. The Fund may use derivatives to fully hedge against exchange rate risk.

Investment Strategy

The Manager uses a passive management strategy, and occasionally an active management strategy.

Who is the Fund suitable for?

- Investors who seek for returns higher than bank deposits and are able to accept lower returns than investing in equities.
- Investors who seek for daily liquidity with a T+1 settlement cycle (T=Transaction date).
- Recommended holding period : not less than a month.

The Fund is not suitable for?

- Investors who seek to receive stable returns or principal preservation.
- Investors who seek to invest in high quality, high liquidity and low volatility fixed income instruments because the Fund is not restricted to invest in money market instruments.

For further clarification on this investment policy and potential risks, what should you do?

- Read the full prospectus thoroughly, or seek advice from the management company or selling agents.
- Do not invest without a thorough understanding of the feature and risks of the Fund.

What are the key risks of the Fund?

Key Risks

- Unlike money market funds, this Fund is not restricted by any regulation to invest only in low-risk instruments, i.e., may invest in low-liquidity debt securities. This Fund may be exposed to greater liquidity risk than money market funds because it may be unable to sell securities in a timely manner at desired prices.
- In the case of redemption requests tend to be more than 2/3 of the number of units sold which may be considered as the trigger of fund liquidation rule. The Management Company may, at its discretion, decide to liquidate the Fund and may suspend or cancel the subscription or redemption requests which have been received.

Definition of Risk Factors

- **Credit Risk** indicates the ability to repay debts and/or obligations of the issuer. For credit risk assessment, credit rating of bonds, which indicates debt servicing ability of the bond issuers based on their past performance and financial strength.

Credit ratings of long-term bonds can be briefly defined as follows.

Grade	TRIS	Fitch	Moody's	S & P	Description
Investment grade	AAA	AAA(thai)	Aaa	AAA	The highest possible rating assigned, which means <u>the lowest default risk</u> .
	AA	AA(thai)	Aa	AA	The second-highest rating, which means <u>very low default risk</u> .
	A	A(thai)	A	A	<u>Low default risk</u> .
	BBB	BBB(thai)	Baa	BBB	<u>Medium default risk</u> .
Below Investment grade	Below BBB	Below BBB(thai)	Below Baa	Below BBB	<u>High default risk</u> .

- Market Risk

(1) **Market Risk of Fixed Income Fund** involves in interest rates movement, which is subject to many external factors such as economic conditions, as well as domestic and international political factors. Normally, bond prices move in the opposite direction of interest rates. For instance, if interest rates in the global market rise, which causes interest rates of newly-issued bonds to increase in tandem, prices of existing bonds will fall. In general, the higher the portfolio duration, the more a bond's price will drop as interest rates rise.

(2) **Market Risk of Equity Fund** means change in value of assets, increase or decrease, in which the Fund invests as a result of external factors, e.g., economic/investment conditions, market sentiment and/or domestic or foreign political factors. If the standard deviation (SD) of the fund is high, this means that the fund has high historical volatility in asset prices.

- **Currency Risk** involves change in foreign exchange rates, which affects value of fund units. For instance, if the fund invests in assets quoted in US Dollar currency and Baht subsequently strengthens, the fund may get lower returns in Baht currency. On the contrary, the fund will gain higher returns in Baht currency under the opposite situation. Therefore, foreign exchange hedging strategy is the important tool for currency risk management. There are several hedging strategies i.e.,

- **Fully hedged or almost fully hedged:** Investors have no currency risk.
- **Partially hedged with specific ratio:** Investors may be exposed to currency risk.
- **Hedging at Fund Manager's discretion:** Investors may be exposed to currency risk.
- **Unhedged:** Investors are fully exposed to currency risk.

- **High Concentration Risk**

(1) **High Issuer Concentration Risk** caused by funds investing in any issuers of more than 10% of the NAV. If an event that affects operations, financial status or the stability of those issuers, the funds may have more volatile operating performance than funds that diversify their investments in many issuers.

(2) **Sector Concentration Risk** caused by investment in certain industries, more than 20% of the NAV, if the event that affects the industry, the funds may have more fluctuating financial performance than the fund that diversifies its investment in many industries.

(3) **Country Concentration Risk** caused by investing in one country more than 20% of the NAV. If the event affects such countries, such as politics, economy, society, etc., the fund may have more volatile operating performance than the diversified fund in many countries.

- **Portfolio Turnover Ratio (PTR) (%)** : Trading volume of fund assets by calculating from the lower value between the sum of the purchase value of the assets and the sum of the sold value of the assets invested in by the fund during the past 1 year divided by the average net asset value of the fund in the same period.

- **Tracking Errors** are fluctuations in the difference between the average return of the fund and the return of the benchmark which reflects the efficiency of mimic the index of the fund that has deviated from the benchmark, for example, if the fund has a low TE, it means that the fund's return has deviation from benchmark at a low rate, so this fund is effective in emulating the reference benchmark. While the funds with a high TE value show that the fund's return has deviated from the benchmark at a high rate, then the chances of return on investment will track the benchmark's return will be decreased etc.
