Other Information

Investment in Mutual Funds **IS NOT** a money deposit.

Disclaimer : The original language of this document is Thai. In case of any discrepancies, the Thai version shall prevail and supersede the English-translated version in all aspects.

What are you going to invest?

- The Fund mainly invests in iShares MSCI ACWI ETF (Master Fund) not less than 80% of NAV.
- The Fund may use derivatives to hedge against exchange rate risk at Fund Manager's discretion.

iShares MSCI ACWI ETF (Master Fund)

Bloomberg Ticker: ACWI:US

- The Master Fund seeks to track the investment results of the MSCI ACWI (the Underlying Index).

Investment Strategy

The Fund is a Feeder Fund seeking to track the Master Fund's performance and the Master Fund uses passive management strategy seeking to track MSCI ACWI Index.

For more information about the Master fund (or foreign fund), please visit

<https://www.ishares.com/us/products/239600/ishares-msci-acwi-etf>

Who is the Fund suitable for?

- Investors who recognize growth potential and seek returns from investing in global equity.
- Investors who are able to tolerate price volatility and understand that they may suffer losses because the value of securities may go down as well as up.
- Investors who can accept foreign exchange risk.
- Investors who can hold investment for not less than 5 years.

The Fund is not suitable for?

- Investors who seek to maintain principal, and cannot accept any potential loss of investment.

For further clarification on this investment policy and potential risks, what should you do?

- Read the full prospectus thoroughly, or seek advice from the management company or selling agents.
- Do not invest without a thorough understanding of the feature and risks of the Fund.

What are the key risks of the Fund?

Key Risks

- The Fund and the Master Fund may invest in derivatives for the purpose of efficient portfolio management and the Fund may invest in structured notes. Hence the Fund bear higher risk than other funds that directly invest in underlying assets.
- The Master Fund may hedge against exchange rate risk and the Fund will use derivatives, at the Fund Manager's discretion, to hedge against exchange rate risk. Hence, the Fund may expose to exchange rate risk.
- The Fund is the Foreign Investment Fund (FIF). The changes in the countries in which it invests – namely political or monetary policy change – may affect the investment unit value. This includes implementation of measures that may cause investors to be unable to receive the redemption sum within the period as specified in the Prospectus.
- The investment may be allocated in both domestic and foreign non-investment grade and unrated debt securities and unlisted securities. So the investor may bear higher default risk.
- The Master Fund invests in emerging market equities. Therefore, it is exposed to higher price volatility than developed market equity funds. Investors may suffer losses or be paid back less than the initial investment.

Risk Spectrum

Risk Factors

Market risk

	Low					High
Standard Deviation (SD)	< 5%	5% - 10%	10% - 15%	15% - 25%	> 25%

The Management Company has reviewed the information in this summary prospectus as of 30 September 2021, with care as the party responsible for the management of the Fund and certifies that the above information is correct, true and not misleading.

Definition of Risk Factors

- **Credit Risk** indicates the ability to repay debts and/or obligations of the issuer. For credit risk assessment, credit rating of bonds, which indicates debt servicing ability of the bond issuers based on their past performance and financial strength.

Credit ratings of long-term bonds can be briefly defined as follows.

Grade	TRIS	Fitch	Moody's	S & P	Description
Investment grade	AAA	AAA(thai)	Aaa	AAA	The highest possible rating assigned, which means <u>the lowest default risk</u> .
	AA	AA(thai)	Aa	AA	The second-highest rating, which means <u>very low default risk</u> .
	A	A(thai)	A	A	<u>Low default risk</u> .
	BBB	BBB(thai)	Baa	BBB	<u>Medium default risk</u> .
Below Investment grade	Below BBB	Below BBB(thai)	Below Baa	Below BBB	<u>High default risk</u> .

- Market Risk

(1) **Market Risk of Fixed Income Fund** involves in interest rates movement, which is subject to many external factors such as economic conditions, as well as domestic and international political factors. Normally, bond prices move in the opposite direction of interest rates. For instance, if interest rates in the global market rise, which causes interest rates of newly-issued bonds to increase in tandem, prices of existing bonds will fall. In general, the higher the portfolio duration, the more a bond's price will drop as interest rates rise.

(2) **Market Risk of Equity Fund** means change in value of assets, increase or decrease, in which the Fund invests as a result of external factors, e.g., economic/investment conditions, market sentiment and/or domestic or foreign political factors. If the standard deviation (SD) of the fund is high, this means that the fund has high historical volatility in asset prices.

- **Currency Risk** involves change in foreign exchange rates, which affects value of fund units. For instance, if the fund invests in assets quoted in US Dollar currency and Baht subsequently strengthens, the fund may get lower returns in Baht currency. On the contrary, the fund will gain higher returns in Baht currency under the opposite situation. Therefore, foreign exchange hedging strategy is the important tool for currency risk management. There are several hedging strategies i.e.,

- **Fully hedged or almost fully hedged:** Investors have no currency risk.
- **Partially hedged with specific ratio:** Investors may be exposed to currency risk.
- **Hedging at Fund Manager's discretion:** Investors may be exposed to currency risk.
- **Unhedged:** Investors are fully exposed to currency risk.

- **High Concentration Risk**

(1) **High Issuer Concentration Risk** caused by funds investing in any issuers of more than 10% of the NAV. If an event that affects operations, financial status or the stability of those issuers, the funds may have more volatile operating performance than funds that diversify their investments in many issuers.

(2) **Sector Concentration Risk** caused by investment in certain industries, more than 20% of the NAV, if the event that affects the industry, the funds may have more fluctuating financial performance than the fund that diversifies its investment in many industries.

(3) **Country Concentration Risk** caused by investing in one country more than 20% of the NAV. If the event affects such countries, such as politics, economy, society, etc., the fund may have more volatile operating performance than the diversified fund in many countries.

- **Portfolio Turnover Ratio (PTR) (%)** : Trading volume of fund assets by calculating from the lower value between the sum of the purchase value of the assets and the sum of the sold value of the assets invested in by the fund during the past 1 year divided by the average net asset value of the fund in the same period.

- **Tracking Errors** are fluctuations in the difference between the average return of the fund and the return of the benchmark which reflects the efficiency of mimic the index of the fund that has deviated from the benchmark, for example, if the fund has a low TE, it means that the fund's return has deviation from benchmark at a low rate, so this fund is effective in emulating the reference benchmark. While the funds with a high TE value show that the fund's return has deviated from the benchmark at a high rate, then the chances of return on investment will track the benchmark's return will be decreased etc.
