Definition of Risk Factors

- Credit Risk** indicates the ability to repay debts and/or obligations of the issuer. For credit risk assessment, credit rating of bonds, which indicates debt servicing ability of the bond issuers based on their past performance and financial strength. Credit ratings of long-term bonds can be briefly defined as follows.

Grade	TRIS	Fitch	Moody's	S&P	Description
Investment grade	AAA	AAA (tha)	Aaa	AAA	The highest possible rating assigned, which means <u>the lowest default risk</u> .
	AA	AA (tha)	Aa	AA	The second-highest rating, which means <u>very low default risk</u> .
	A	A (tha)	A	A	<u>Low default risk</u> .
	BBB	BBB (tha)	Baa	BBB	<u>Medium default risk</u> .
Below Investment grade	Below BBB	Below BBB (tha)	Below Baa	Below BBB	<u>High default risk</u> .

- Market Risk** involves in interest rates movement, which is subject to many external factors such as economic conditions, as well as domestic and international political factors. If the standard deviation (SD) of the fund is high, this means that the fund has high historical volatility in asset prices.

- High Concentration Risk**
 - High Issuer Concentration Risk occurs when the fund invests in any issuer more than 10% of NAV. If there are any events affect the operation, financial status or stability of such issuer, the fund may have more performance volatility than the fund that diversifies its investment in various issuers.

 - High Sector Concentration Risk occurs when the fund invests in any issuer more than 20% of NAV. If there are any events affect such sector, the fund may have more performance volatility than the fund that diversifies its investment in many sectors.

 - High Country Concentration Risk occurs when the fund invests in any country more than 20% of NAV. If there are any events affect such country such as political, economic and social issues. The fund may have more performance volatility than the fund that diversifies its investment in many countries.

- **Exchange Rate Risk** involves change in foreign exchange rates, which affects value of fund units. For instance, if the fund invests in assets quoted in US Dollar currency and Baht subsequently strengthens, the fund may get lower returns in Baht currency. On the contrary, the fund will gain higher returns in Baht currency under the opposite situation. Therefore, foreign exchange hedging strategy is the important tool for currency risk management. There are several hedging strategies i.e.,
 - **Fully hedged or almost fully hedged:** Investors have no exchange rate risk.
 - **Partially hedged with specific ratio:** Investors may be exposed to exchange rate risk.
 - **Hedging at Fund Manager's discretion:** Investors may be exposed to exchange rate risk.
 - **Unhedged:** Investors are fully exposed to exchange rate risk.

Request Form

(for Using Proceeds from Auto-Redemption to Subscribe Investment Units of Mutual Fund)

I,.....

am a unitholder of.....("redeemed fund")

Fund Account No.,

wish the management company to use proceeds from auto-redemption of the last period to subscribe investment units of mutual fund ("reinvested fund") as I request. (Please choose only one fund)

K Treasury Fund (K-TREASURY) Fund Account No.....

K Short Term Fixed Income Fund (K-SF) Fund Account No.

I acknowledge that The Management Company will use proceeds from auto-redemption of redeemed fund to subscribe investment units of reinvested fund as I requested above. Numbers of investment units of reinvested fund, which I will receive, are calculated by using subscription price of reinvested fund on auto-redemption day of redeemed fund.

I have studied and understood the information in prospectus of both redeemed fund and reinvested fund, including risk levels of both redeemed fund and reinvested fund.
