**The Fund reserves the right not to offer any fund units**

The Fund reserves the right not to offer any fund units to or for the benefit of the United States of America, US citizens, residents of the United States of America, or persons normally residing in the United States of America as well as the assets of such persons and companies or partnerships established and operating in the United States of America.

- Investment in unit trusts is neither bank deposit nor under the protection of Deposit Protection Agency. Investors may have risk of not receiving return of investment funds in full.
- Approved and regulated by The office of the Securities and Exchange Commission.
- The consideration of draft prospectus of this Fund does not mean that the SEC has certified the correctness of the information in the prospectus or guaranteed the price or return of the unit trusts. As the person responsible for managing the Mutual Fund, The Management Company carefully reviewed the information in the Fund Fact Sheet as of June 30, 2020 and hereby certifies that the information is correct, not fault and does not mislead.

## Risk Description

- **Credit Risk** indicates the ability to repay debts and/or obligations of the issuer. For credit risk assessment, credit rating of bonds, which indicates debt servicing ability of the bond issuers based on their past performance and financial strength. Credit ratings of long-term bonds can be briefly defined as follows.

Rate	TRIS	Fitch	Moody's	S&P	Description
Investment grade	AAA	AAA(th)	Aaa	AAA	The highest possible rating assigned, which means the lowest risk of payment default.
	AA	AA(th)	Aa	AA	The second-highest rating, which means very low risk of payment default.
	A	A(th)	A	A	Low risk of payment default.
	BBB	BBB(th)	Baa	BBB	Medium risk of payment default.
Below Investment grade	Below BBB	Below BBB(th)	Below Baa	Below BBB	High risk of payment default.

- **Market Risk** of Fixed Income Fund involves in interest rates movement, which is subject to many external factors such as economic conditions, as well as domestic and international political factors. Normally, bond prices move in the opposite direction of interest rates. For instance, if interest rates in the global market are rising, which causes interest rates of newly-issued bonds to increase in tandem, prices of existing bonds are falling. Mutual funds with greater portfolio duration are likely to witness more price fluctuation than those with smaller portfolio duration.
- **High Concentration Risk**
  - High Issuer Concentration Risk occurs when the fund invests in any issuer more than 10% of NAV. If there are any events affect the operation, financial status or stability of such issuer, the fund may have more performance volatility than the fund that diversifies its investment in various issuers.
  - High Sector Concentration Risk occurs when the fund invests in any issuer more than 20% of NAV. If there are any events affect such sector, the fund may have more performance volatility than the fund that diversifies its investment in many sectors.
  - High Country Concentration Risk occurs when the fund invests in any country more than 20% of NAV. If there are any events affect such country such as political, economic and social issues. The fund may have more performance volatility than the fund that diversifies its investment in many countries.

- **Exchange Rate Risk** involves change in foreign exchange rates, which affects value of fund units. For instance, if a fund invests in assets quoted in US Dollar currency during time of Baht depreciation but takes profit when the Baht strengthens, the fund will get lower returns in local currency. In contrast, if the fund invests in those assets when Baht is stronger and takes profit during times of a weakening Baht, it will gain higher returns in local currency. Therefore, foreign exchange hedging strategy is a major tool for currency risk prevention or reduction. There are many ways to limit currency risks, i.e.,
  - Fully hedged or almost fully hedged: Investors have no currency risk.
  - Partially hedged with specific ratio: Investors may be exposed to currency risk.
  - Hedging at Fund Manager's discretion: Investors may be exposed to currency risk.
  - Unhedged: Investors are fully exposed to currency risk.
